

Dermaqea Grant Application: Invisible Cryptographic Authentication for Skincare Safety

Dermaqea's technology embeds invisible cryptographic signatures into packaging artwork during design. Signatures are imperceptible to the human eye but detectable by smartphones. Consumers scan with Dermaqea's app to verify authenticity instantly. Each scan generates supply chain intelligence and consumer engagement data with partner brands

Months 7-9: Consumer testing and data collection

Technology

Generated: July 30, 2026

Months 10-12: Scale preparation and grant reporting

- Invisible cryptographic signatures embedded in artwork

Table of Contents

- No alteration to packaging design

• Dermaqea Grant Application

• Ashley Luna, CEO & Founder: 10 years in beauty tech and supply chain security

• Executive Summary

• Background: Analytical crypto and forensic cryptography, former lead security engineer at major tech firm

• Problem Statement

• James Wilentz, Managing Partnership & Packaging Material Industry BD and alliances

• Solution

Market Opportunity

• Technology

• Global skincare market: \$189B (2023)

• Market Opportunity

Dermaqea is seeking to launch its first pilot, generate early revenue, and establish itself as the trust layer for skincare authenticity. We request your support to combat counterfeit cosmetics and protect consumers worldwide.

- Counterfeit cosmetics market: \$75B annually

- Target: Premium skincare brands in high-counterfeit-risk regions

- Budget Request

Call to Action

- Initial focus: US and EU markets with strong regulatory focus on product safety

- Timeline

Approve this grant to empower Dermaqea to deliver invisible authentication that saves lives and preserves brand trust.

• Conclusion

- Protect consumer health from harmful counterfeit ingredients

• Call to Action

- Preserve brand reputation and revenue

- Provide actionable supply chain data to reduce counterfeiting

Dermaqea Grant Application

- Enable consumer engagement through verification scans

Executive Summary

Scalable technology for pharmaceuticals, and luxury goods

Budget Request

Dermaqea is seeking to develop and pilot its invisible cryptographic authentication technology for premium skincare packaging. Our solution embeds undetectable cryptographic signatures directly into

product artwork, enabling instant consumer verification via smartphone scan. This addresses the \$75B

global counterfeit cosmetics market that threatens consumer health and brand trust.

- Technology development: \$100,000

Problem Statement

- Premium skincare brands: \$75,000

- Regulatory compliance and testing: \$40,000

Counterfeit skincare products cause chemical burns, allergic reactions, and long-term skin damage.

Existing anti-counterfeit solutions (QR codes, holograms) are easily replicated, expensive, or damage

premium packaging aesthetics. Brands need an invisible, unforgeable, frictionless authentication method.
